1. Open Safari and navigate to http://wpa2setup.ua.edu/CloudPath/ (URL is case sensitive). After reading the UA Network Acceptable Use Agreement, check the box accepting the End-User License Agreement and click Start.

For Mountain Lion Only:
If you receive a pop-up stating that the “App can’t be opened because it is from an unidentified developer” follow the steps below:

1. Under System Preferences, open Security & Privacy
2. Under the General tab, click the  and enter your Username & Password to unlock the settings
3. Under “Allow applications downloaded from:” select Anywhere
4. You will need to click  to lock the settings
5. Now you should be able to continue with installation
2. You will be prompted to “Allow all applets from ‘wpa2.setup.ua.edu’”. Check the box and click Allow.

3. A pop-up will appear prompting you to enter your myBama User Id & Password. Enter your credentials and click Continue.
4. You must be an administrator on the computer to make the changes so you may be prompted multiple times to enter the **Username & Password** you use to log into the computer.

5. Upon successful connection, your browser will redirect to UA’s homepage and you will have a pop-up stating that you have successfully connected. Click **Done**.
6. Once connected to UA-WPA2, you will need to forget the other wireless networks. In order to do so, follow the instructions below:

- Open **System Preferences** (gear icon on the dock)
- Open **Network**
- Click on **Airport** or **Wi-Fi** on the left
- Click **Advanced** at the lower right
- Locate the name of the network that you no longer need in the list of networks and click on it to highlight it. In this case, select “**UA Public Wireless** or **UA ResNet Wireless**”.
- Click the - (minus) button at the bottom of the list to delete it
- Repeat the process for any other networks that you no longer need or use
- Click **OK**
- Click **Apply**
